

The Patent Office

The Patent Office
Concept House
Cardiff Road
Newport
South Wales
NP9 1RH

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

I also certify that the attached copy of the request for grant of a Patent (Form 1/77) bears an amendment, effected by this office, following a request by the applicant and agreed to by the Comptroller-General.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

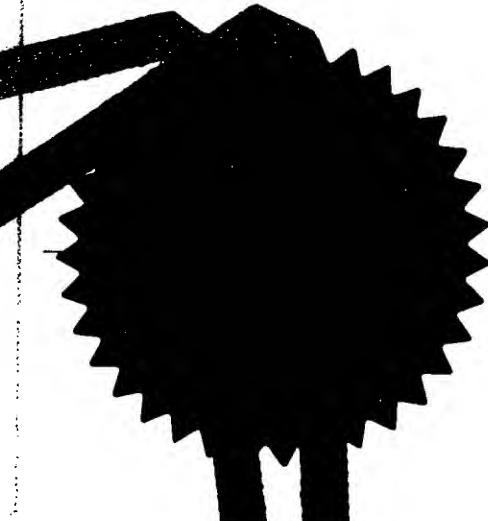

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Notes

Please type, or write in dark ink using CAPITAL letters. A prescribed fee is payable for a request for grant of a patent. For details, please contact the Patent Office (telephone 071-438 4700).

Rule 16 of the Patents Rules 1990 is the main rule governing the completion and filing of this form.

(1) Do not give trading styles, for example, 'Trading as XYZ company', nationality or former names, for example, 'formerly (known as) ABC Ltd' as these are not required.

Warning
After an application for a Patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977 and will inform the applicant if such prohibition or restriction is necessary. Applicants resident in the United Kingdom are also reminded that under Section 23, applications may not be filed abroad without written permission unless an application has been filed not less than 6 weeks previously in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction revoked.

Patent
Form 1/77**

Patents Act 1977

① Title of invention

1 Please give the title of the invention WAVELENGTH - SWEPT FIBER LASER WITH FREQUENCY SHIFTED FEEDBACK

② Applicant's details

First or only applicant

2a If you are applying as a corporate body please give:

Corporate name UNIVERSITY OF SOUTHAMPTON

Country (and State of incorporation, if appropriate)

UK

2b If you are applying as an individual or one of a partnership please give in full:

Surname N/A

Forenames

2c In all cases, please give the following details:

Address HIGHFIELD
SOUTHAMPTON
HANTS

UK postcode
(if applicable)

SO17 1 BJ

Country
ADP number
(if known)

UK

798470002

THE PATENT OFFICE

A

- SEP 1996

RECEIVED BY FAX

Please mark correct box

① Reference number

4 Agent's or applicant's reference number (if applicable)

0621/01

② Claiming an earlier application date

5 Are you claiming that this application be treated as having been filed on the date of filing of an earlier application?

Yes No ➡ go to 6
please give details below

number of earlier application or patent number

filing date

(day month year)

and the Section of the Patents Act 1977 under which you are claiming:

15(4) (Divisional) 8(3) 12(6) 37(4)

④ If you are declaring priority from a PCT Application please enter 'PCT' as the country and enter the country code (for example, GB) as part of the application number.

Please give the date in all number format, for example, 31/05/90 for 31 May 1990.

Please mark correct box

⑤ Declaration of priority

6 If you are declaring priority from previous application(s), please give:

Country of filing	Priority application number (if known)	Filing date (day, month, year)
	N/A	

THE PATENT OFFICE

① The answer must be 'No' if:
 • any applicant is not an inventor
 'here is an inventor who is not an
 applicant, or
 • any applicant is a corporate body.

② Please supply duplicates of
 claim(s), abstract, description and
 drawing(s).

THE PATENT OFFICE

③ Inventorship A

7 Are you (the applicant or applicants) the sole inventor or the joint inventors?

Please mark correct box

Yes No

A Statement of Inventorship on Patents

Form 7/77 will need to be filed (see Rule 15).

④ Checklist

8a Please fill in the number of sheets for each of the following types of document contained in this application.

Continuation sheets for this Patents Form 1/77

Claim(s)

Description 4

Abstract

Drawing(s) 3

8b Which of the following documents also accompanies the application?

Priority documents (please state how many) 0

Translation(s) of Priority documents (please state how many) 0

Patents Form 7/77 – Statement of Inventorship and Right to Grant
 (please state how many) 0

Patents Form 9/77 – Preliminary Examination/Search 0

Patents Form 10/77 – Request for Substantive Examination 0

Please mark correct box(es)

⑤ You or your appointed agent (see Rule 90 of the Patents Rules 1990) must sign this request.

Please sign here ➔

Signed Peter Hughes Date 9 9 1996
 (day month year)

A completed fee sheet should preferably accompany the fee.

Please return the completed form, attachments and duplicates where requested, together with the prescribed fee to either:

We report a frequency-shifted, wavelength-swept Er/Yb-doped fiber laser. By matching the intra-cavity filter sweep rate to the frequency shift per round trip controllable, high power (>100mW), cw modeless output over 38nm, with <0.1nm instantaneous linewidth is obtained.

Wavelength-swept laser..., S. H. Yun, et al.

Frequency Swept Fibre Lasers (FSFL's) incorporating Acousto-Optic Tunable Filters (AOTF's) offer great potential for use in a wide variety of applications e.g. spectral device characterization, grating array monitoring and low-coherence optical fibre sensing. However to date FSFL's have received little attention within the literature due to the restricted scanning ranges (<20nm) and ~ 1nm instantaneous linewidths previously achieved [1].

In this paper we demonstrate a diode-pumped, high-power (>100mW), wavelength-swept, FSFL in which the output wavelength is continuously and repeatedly tuned over a broad range (upto 38nm) by modulation of the intracavity AOTF peak-wavelength. Furthermore, we demonstrate for the first time that resonant matching of the filter peak sweep rate to the acousto-optic frequency shift per round trip suppresses the nonlinear pulsing observed in conventional frequency-shift lasers [2,3], and results in significant narrowing of the instantaneous swept linewidth (<0.1nm).

Fig.1 shows the 19m ring laser cavity incorporating a bulk-optic AOTF (4 nm bandwidth, 68 MHz frequency upshift). The acoustic drive to the device was controlled with a phase-locked loop, with fast/independent electrical control of the acoustic power and frequency. Using two phase-locked, arbitrary function generators we could therefore synchronously, and independently temporally control the peak transmission and wavelength of the filter.

We investigated the laser performance under swept operation of the AOTF for a number of sweep ranges, functions and rates. The time averaged laser output was monitored using an OSA and the instantaneous linewidth determined by examining the temporal response of the laser output on reflection from a narrowband (7 GHz) fibre grating. In particular we investigated sweep rates around the resonant case in which the filter peak is moved so as follow the 720

Wavelength-swept laser..., S. H. Yun, et al.

GHz/ms frequency shift imposed by the AOTF. For a 20nm sweep range this corresponds to a sweep rate of ~288 Hz. In Fig.2 we plot measurements of the instantaneous linewidth as a function of sweep rate for the 20nm sweep range case. The results clearly show a strong spectral narrowing at the resonant sweep rate in excellent agreement with our theoretical expectations. Moreover, the laser's natural tendency to pulse [3] was suppressed. On resonance linear radiation moving under the filter peak experiences the lowest system loss making cw operation the preferred mode.

Figs 3a shows the peak-hold spectrum obtained by resonant tracking of the acoustic frequency shift over 20 nm for a fixed acoustic power. The sweep frequency and the output power were 290 Hz and 100 mW, respectively. The spectral shape and output power were almost independent of the sweep rate up to 7 kHz. Sweep ranges >38nm were readily achieved. In Fig 3.b we show that control of the spectral form can be achieved with synchronous frequency and amplitude modulation. Triangular and square wave modulated forms were chosen for this purpose.

In summary, we have reported a wavelength-swept fiber laser with upto 38 nm sweep range, <0.1-nm instantaneous linewidth, user definable spectral shape, and >100-mW output power. We believe such sources to have great potential for use in applications requiring accurate spectral control, or measurements.
